## What is Ecommerce Website?

With ecommerce, consumers are able to exchange services and goods electronically with no time or distance barriers to worry about. Within the past few years, this type of commerce has grown at an exponential rate; something that it is expected to continue doing for the foreseeable future too. No doubt, in the next few years, there will be a blur between electronic and conventional types of commerce, as more businesses decide to take at least part of their business to the web.
